

Appointment of JC Evensen to Advisory Board

Pallas is extremely excited to welcome Jon Christian Evensen ("JC") as our newest Advisory Board member. JC has over a decade of experience in investment banking and investment management focused on natural resources. He most recently served as member of the Board of Directors to Patriot Battery Metals. While at Luminus Management, he built the metals & mining vertical to invest over \$1 billion across the capital structure along with physical commodities and commodity futures. In addition to his time at Luminus, JC has also worked at Millennium and in Morgan Stanley's investment banking division.

In the short time we've had the fortune of working with JC since investing in Pallas, he's been instrumental in making introductions to sophisticated retail and institutional investors, strategic partners, and major mining houses. We look forward to continuing our working relationship as Pallas enters its next phase of growth.

JC commented, "I have been very impressed with both Simon and Daniel since being introduced to Pallas Resources earlier this year. Exploration is the tip of the spear for the mining industry, and Pallas is pointing it in an exciting target rich direction. I am honored to have the opportunity to support the next generation of talent who are looking for the next great deposits that will support all our economies and improving quality of life globally. Kazakhstan has proven over time to be one of the best mining jurisdictions in the world with both a robust mining tradition and underexplored geologic potential."

About Pallas Resources:

Pallas is a Central Asian explorer with a fresh approach to discovery. We employ a disciplined target selection process, focusing on highly prospective yet under-explored regions within Central Asia, predominantly Kazakhstan. We are on the hunt for large-scale copper, gold and nickel systems across districts that are ripe for the application of modern exploration techniques. These frontiers remain largely untouched by present-day explorers despite prior Tier 1 Soviet-era discoveries.

Further information can be found on the company's website: www.pallasresources.com
